ADMINISTRATIVE OFFICES 312/231-0206 • CUSTOMER SERVICES 312/231-8200

# CID NET™

## A product of The Sidwell Company

CID NET™ is a **C**omputer **I**ntegrated **D**ata **NET** work for county government. The system is a mature software package that has been in use in many counties for the past few years. CID NET™ has been enhanced and modified making it State-Of-The-Art in simplicity, speed, and tutorial, with expanded history and information retrievable capability.

CID NET™ is an excellent "BREAD & BUTTER" system for getting the day to day work done in the most active departments: accounting, billing, receiving, and record keeping. Departments that deal with data processing related functions of file maintenance, screen display or printed reports really see what a workhorse CID NET™ is. Operator simplicity, good audit trail, proof, and selected reporting to screen and/or hardcopy are areas where this system shines.

CID NET™ covers the in-depth requirements within the bounds as described above for County Assessors, Treasurers, Auditors/Clerks, Voter Registration, County Road Cost Accounting, inventory, equipment rental and revolving fund. The total number of programs exceeds 300.

CID NET™ manifests broadness in scope and depth in available information, while providing front to back integration and interaction. All of this power is managed utilizing the most current software technology: Pull-Down Menus, Pop-Up "HELP" instructions, Windowing selected data elements, automatically generated descriptive notes for exceptional input activity, and free form operator descriptive notes at the associated record level.

Complete current data, saved, accessible, as well as historical data on the screen or printed is another highlight of CID NET™. For example, indexing a fund number on the Treasurers terminal displays the current cash position of the fund, plus detail line items of taxes, miscellaneous receipts, account balances for warrants/checks, bonds, investments, and fund balances. These figures are current up through the close of business yesterday.

CID NET™ is hardware independent, and will operate under all of the more popular, and widely used disk systems such as: MSDOS, UNIX, and ZENIX. It can operate in a stand-alone, time shared, or PC network environment. In a PC network environment The Sidwell Company will provide not only installation and training services, but hardware and software maintenance beyond the initial installation phase.
